

GF-P8 8-PUSHBUTTON/LED PANEL COCKPIT CONTROL MODULE

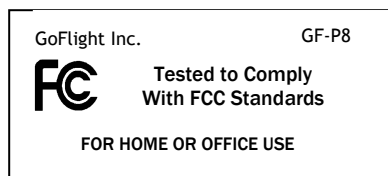

INSTALLATION INSTRUCTIONS

Congratulations on your purchase of a GoFlight GF-P8. The GF-P8 is a powerful and versatile device that is sure to make your simulated flying more realistic, precise, and fun. We hope that you find it easy to install, configure, and use.

NOTE *If you own other GoFlight hardware and have already installed the same version of software on your system, you do not need to install the software again. Simply skip the software installation step in the instructions below.*

Installing a GF-P8 Module

1. Get on line and go to goflightinc.com.
2. On the home page click Support/Downloads (Located on the orange line just below our logo).
3. Click on "Module Support Software" to download our latest drivers.
4. Click "Run". Follow the instruction to load your software.
5. If you are going to mount the GF-P8 module into a GF-AC rack, install the module in any desired location in the rack using the two thumbscrews provided.
6. Plug the USB cable "B" connector (square) end into the connector on the back of the GF-P8 circuit board.
7. Plug the USB cable "A" connector end (rectangular) to a USB port on your computer. The message "New Hardware Found" will appear briefly, showing that the GF-P8 was detected.
8. From your Windows desktop, click Start-->Programs-->GoFlight to access the GoFlight program folder. To configure your GF-P8 for use with your favorite flight simulator, run the GFConfig program.
